

DigiEduHack 2023

Finding motivation through analysis

Summary: In this hackathon me and my colleagues tackled the challenge of helping students with finding motivation to study. We chose to shine a light on the importance of progress in ones journey of learning and discovery. We believe modern systems focus too much on the standardization of peoples and their intellect, so we hope that with the help of our application, one can truly appreciate and analyze ones progress through his school year and perhaps extract a new drive for knowledge. It is important to take a look once in a while at how far you have come to truly appreciate life and where it is going to be in the future. This application creates a linear graph of your grades and gives an analysis of your progress.
