

DigiEduHack Datorium 2025

Team Flow

Solution Description:

A lack of clarity in the material taught is one of the major motivating factors for students to lose their eagerness to learn. Interest is bound to flag when a topic seems too hard to grasp or simply muddled. To avoid this, the material should be explained in words as simple as possible, with substantial examples taken from real life and supported by pictures, videos, and visual means. The ability of students to question and find answers together will enable them to feel involved in the process. An app might propose a few different ways to understand the same topic: read the text, watch a video, or play with a game-that way, everyone chooses what fits better. Another option is to add the sharing of tips and memory methods the students find helpful for learning; in this way, they help each other. This will build up support and make studying more interesting and clear.

App design (prototype) in Figma:
