VISIONARY MINDS

INT EDU WORLD

Revolutionizing Education for Future Generations with Innovative Technologies Our team is dedicated to leveraging new technologies and innovations to provide a transformative, action-oriented, and up-to-date education that empowers students to be themselves and change the world.

KNOW US

A virtual reality learning space with noise cancellation, AI-based characters, tailored curriculum and evaluations, and a reward system with a market model could provide an immersive learning experience. Partnerships with schools and World App would be established.

VISION, MISSION AND VALORS

The aim is to improve global human development by changing attitudes towards education in youth. The objective is to decrease educational inequality, promote technology education, and encourage respect, equality, diversity, inclusion, social responsibility, sustainability, and innovation.

SUSTENTABILITY

Integrating the solution into educational institutions will take time due to the need for adapting the tool to their daily activities and classes.

The production and implementation of technology also require time.

CONTEXT

Student disengagement and lack of interest in studying stem from social pressure and distractions. The educational system has not adapted to compete with technology and entertainment, creating a gap between educational resources and social interest.
