TECNOLOGY

TEACHING OF THE FUTURE BETWEEN 3D AND ARTIFICIAL INTELLIGENCE

Problem

- Emotional management
- Non-customizable teaching;
- Learning limited by location and time;

TARGET:

- High school students
- University students
- those taking exams/competitions

Our Solution

- virtual teacher (AI)
- simulation test/exam takes place;
- improved emotional management (anxiety, stress, etc.)

A person wearing a VR headset is shown in profile, interacting with a virtual space environment. The background features a large planet with rings, a smaller planet, and a blue nebula. The person's hands are raised, with fingers pointing towards the virtual objects. The overall scene is set against a dark blue background with circuit-like patterns.

Pro:

- Immersive and engaging experience
- Support in managing individual difficulties
- Advanced simulations and visualizations

- Motivation and engagement
- Immediate and measurable feedback
- Professional psychological support

Innovativeness

- multiple objectives in a single project;
- better manage emotions in situations of stress/panic and tension;

DIGITAL TWIN

Future Prospects

- Mobile development via apps
- High scalability
- Vastly expanded functionality
- Usable in other contexts/disciplines
- Continuous upgrades of the virtual interface
