

Motivational Program for Students

Our program motivates students to learn and take their studies more responsibly. We implemented our idea as a WEB page using HTML, CSS, and JavaScript. We also used APIs to provide different quotes to users. Through our program, we can encourage students to become more motivated by offering motivational quotations on various topics so that they can achieve their goals and work hard. Our idea allows promote students' willingness and motivation to learn, increase participation in the learning process and improve learning success. Moreover, a user can record the goals that he or she wants to achieve in order to visually see his or her main tasks. Once a certain point is complete, the user can strike down the completed work and view the start date and end date.
