

SociAi

SociAi is an interactive AI learning platform that helps students in grades 7–9 develop important social skills through realistic situations and guided conversations.

Many students find social studies difficult to connect with real life. They often struggle with motivation and with applying theory to everyday situations. Some lack skills such as critical thinking, empathy, communication, conflict resolution, and safe behavior online.

SociAi helps change this by making social studies practical, fun, and personal.

Students explore everyday scenarios — like disagreements with classmates, emotional challenges, spending money wisely, or taking part in society. They make choices, see the results, and learn from them.

Each student receives personalized feedback on their communication, emotional understanding, and problem-solving. The platform mixes gamelike elements, learning materials, and AI analysis to create engaging and meaningful learning.

Students can explore topics such as:

- Conflict and emotions
- Financial literacy
- Law, democracy, and civic participation
- Media and information literacy

The main users are middle-school students and social studies teachers.

SociAi helps students build empathy, critical thinking, and digital

skills, while teachers gain a modern tool that makes lessons more interesting and effective.

Core idea: Instead of only reading theory, students actively take part, explore real situations, and learn by doing — building confidence and responsible decision-making in both real life and online.
