

Assistant for **i**nclusive

Didactics

One input - **many outputs!**

**Our application
makes teachers' work
easier by providing
pre-defined prompts.**

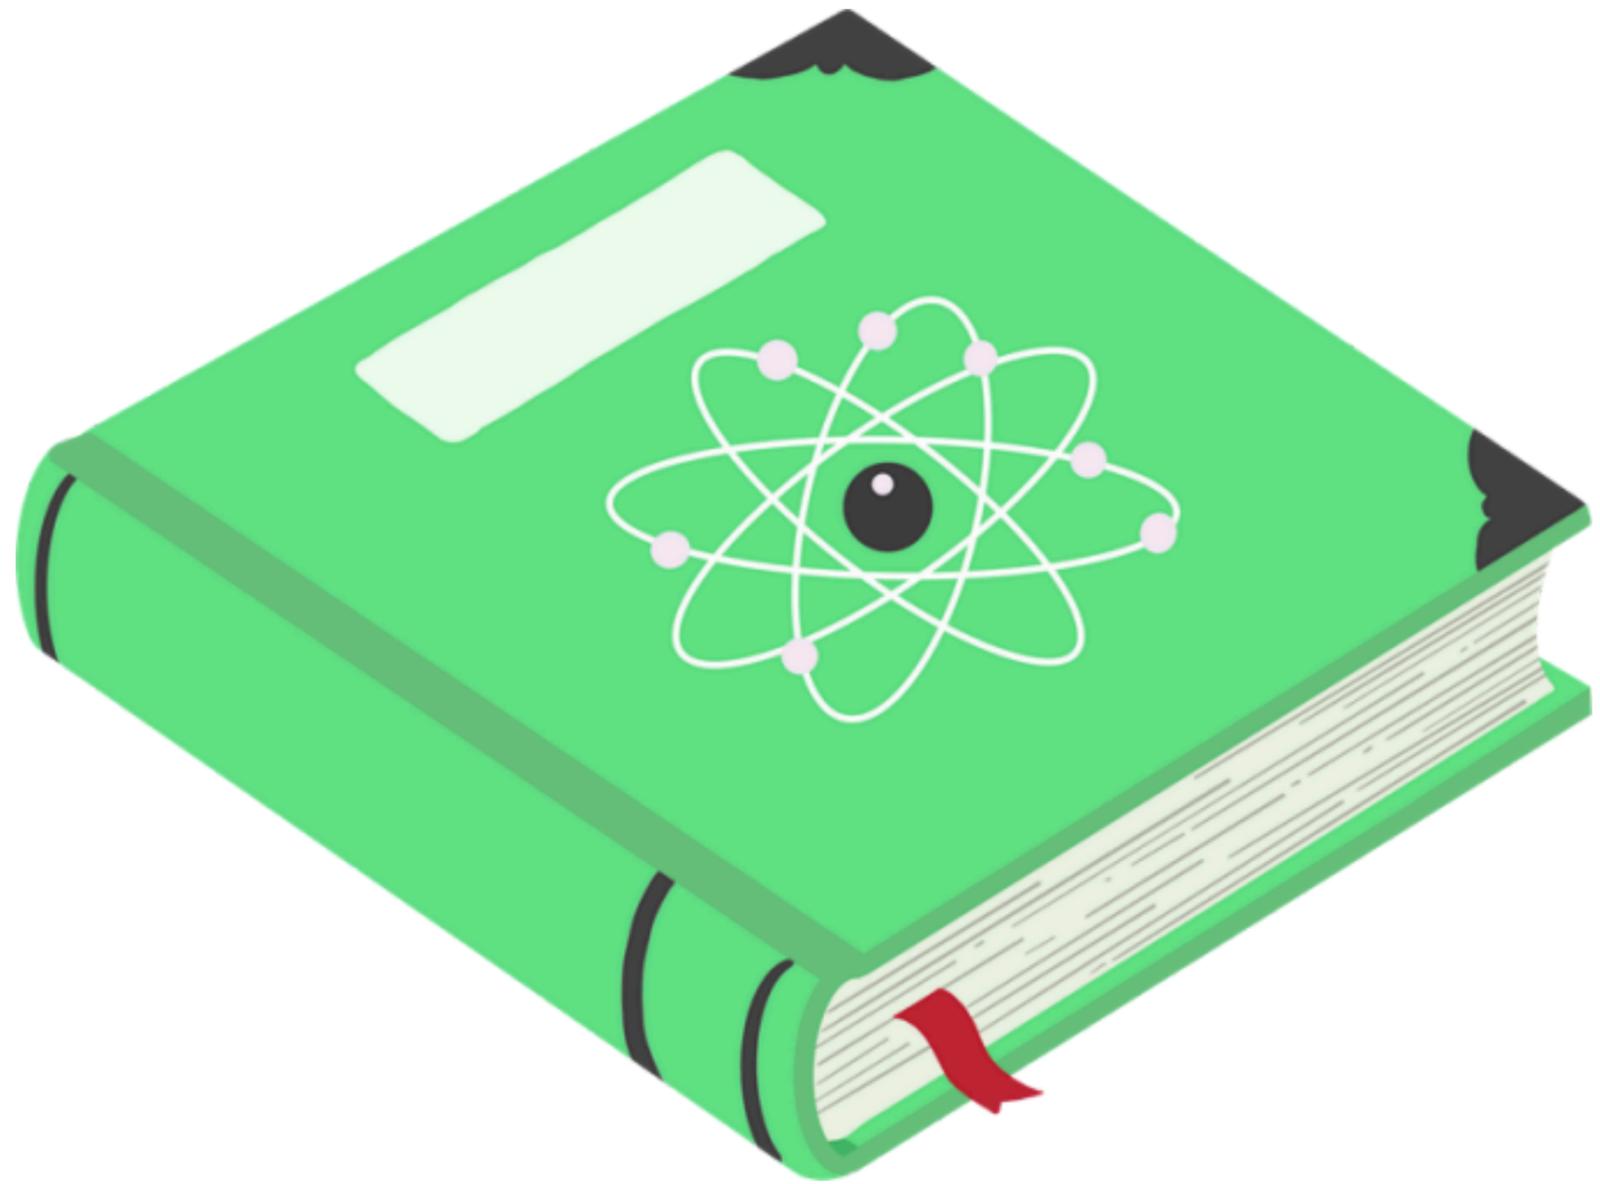

Why?

Teachers are able to work with AI, but they often don't know how to prompt it effectively or achieve the desired output for specific students.

What **does every teacher**

have ? 

A teacher can input text into the application
(a photographed page from a textbook),
which can then be differentiated for various student target groups.

- **Text retelling**
- **Worksheets**
- **Quizzes/Tests**
- **Project-based learning**
- **Escape room activities**

...and all of this for a **specific group of students.**
