TeachMI App

(MI-Mākslīgais Intelekts)

TeachMI
MIDDLE SCHOOL
LEARNING APP

The main goal of our application is to motivate students to learn independently.

Problems we identified:

- Learning has become boring for many teenagers because of long, unclear texts.
- Outdated books and old teaching methods make students lose motivation.

Our solution — TeachMI

TeachMI is an educational app with three main features:

1. **MIGame** – This function can scan long educational texts and **turn them into interactive games,** helping students better understand and remember difficult concepts.
2. **MICareer** – Knowing that high school students want to study subjects related to their future careers, MICareer helps them **create a personalized schedule** and provides **materials** they need to start learning for their desired profession.
3. **MILib** – A smart library where AI **creates books in Latvian** with up-to-date information, collected from **student textbooks across the EU.**

In addition, students will have the **opportunity to choose their own chatbot,** which will explain and teach in the language and style they understand best.
