Solution Details

Solution description

Learning has practiced interaction between teachers and students for a long period now. This collaboration has really shown need for improvement to accomplish even further outcomes. In my solution, icorehub is trying to take this collaboration nature of learning to higher level of international participation.

Solution context

Learning need a vast sources of learning materials. Although learning institutions have worked hard to accomplish this goal. There is still a huge field which have been exploited just a small tip of it's rich ecosystem, Big Data and internet. A good internet based way of learning is in it's young stages while it holds a lot of potential which need to be exploited.

Conventional learning also need to be flexible enough to flow with the ever growing ecosystem.

Solution target group

Icorehub is targeting all the education ecosystem. Giving students with additional tools and an extensive source of knowledge.

Students will acquire new skills by learning from one another. Giving students the power to be global learners equips them with a wide rage of skills which is exactly what is needed at the job market

Teacher will also have an easy way of teaching.

Companies and institutions who employ this graduates will experience a deliverance of services and goods because of their skilled employees.

Solution impact

Icorehub will impact every part of the society. Student will have their hands on global communities hence having a global mindset in everything they learn. This will give the nation employing this practices an advantage of delivering global products and exploiting global markets like never before. A well educated society will have I vast well running economy.

Solution tweet text

Creating a global learning platform will not only benefit the party implementing the platform but it will also increase the rate of human civilization growth.

Solution innovativeness

The goal my project is trying to accomplish has been attempted by many parties although through other sectors of the society like social media hence delivering less impact as intended due to lack of focus. Creating a learning platform as big as the largest social networks is what the education needs.

Solution transferability

A global society of education maintained with a high integrity and focus will impact directly in the startup world.

Startups naturally emerges from a wide and collaborative human activities. This is due to mixture of idea across different mindsets. This means that a global education palatiform will lead to the same with time.

Solution sustainability

Once the first platform development phase is completed. I predict a high rate of adoption and a booming great and rich future as the platform develop a perpetual ecosystem around itself.

Solution team work

I have developed the project alone so far. Am willing to bring the product out in a collaborative and partnership environment and make it spread its roots across all parts of the society.
