DigiEDU

Model suitable for students needs

The educational model has the peculiarity of choosing the dynamic of how to take classes.You can choose between online, face-to-face or pre-recorded classes and switch modes depending on your needs.

Team: DigiEDU

Members roles and background

Saith Antonio Martínez Coronado: I was the second biggest collaborator and I helped a lot at finding middle ground for all of us. After that, we were able to build our idea.

Jorge Luis Tinajero Parra: He was the one that was able to organize us as a team. He was the leader, the one who give birth to our first idea.

Angel Saldate Mazon: Was a collaborator of the team. He worked as we told him, eventhough he didn´t had new ideas to provide, he was able to develop the ideas more. Also communication between the team was way easier because of him

Solution Details

Solution description

It is an educational model that allows the student to choose that dynamic to adapt to their needs and can migrate from them as many times as required. This also seeks schools to change the way they evaluate and set aside exams and focus on projects that will last for the duration of the course. This seeks to strengthen students' skills to solve problems in addition to self-learning

Solution context

In the world after COVID, online classes will already be part of people's culture and expectations. People want to take advantage of their time on things other than just school. That's why we want to take advantage of this acceptance to solve the lack of motivation that students have because they do not concentrate their energies on specific projects.

Solution target group

The solution we propose focuses on high school, graduate and possibly for companies looking to train their employees

Solution impact

We will impact the way we take classes, give students complete freedom to decide how to take their classes always.Our strategy will be based on that principle and in this way students will be able to choose to customize their challenging projects, thus learning, at their own pace and in their own way.The way we will measure the success of our idea will be through the amount of knowledge acquired that is transferable to future projects.

Solution tweet text

With us you can learn at your own pace and at your own pace without worrying about schedules, you will have total freedom to invest your time in other arreas so that you develop

Solution innovativeness

Innovation is found in two areas: the first being the flexibility students have for their classes. The second in the realization and evaluation of projects

Solution transferability

Our educational model is easily transferable to companies looking for training for their employees and even for high school students who want to spend their time working as well.

Solution sustainability

In the medium and long term I see our educational model as an affordable and accessible alternative to anyone with internet connection. We believe that to be successful it is necessary to seek alliances with educational companies such as coursera, blackboard, schoology, etc.

Solution team work

We worked decently, the only problem I saw was time, because being two days and having several lectures we felt very overwhelmed. Anyway, we met and communicated in an excellent way
