

DESIGN FUTURE LEARNING EXPERIENCES FOR GREEN SKILLS

Submission by Digital Warriors

The Online Challenge Creator
Visual storyboard

How the journey begins

'The learner is immediately shown this as a challenge, not traditional e-learning content' - the time limit evokes excitement, pressure, a goal to be reached!

Expert briefing

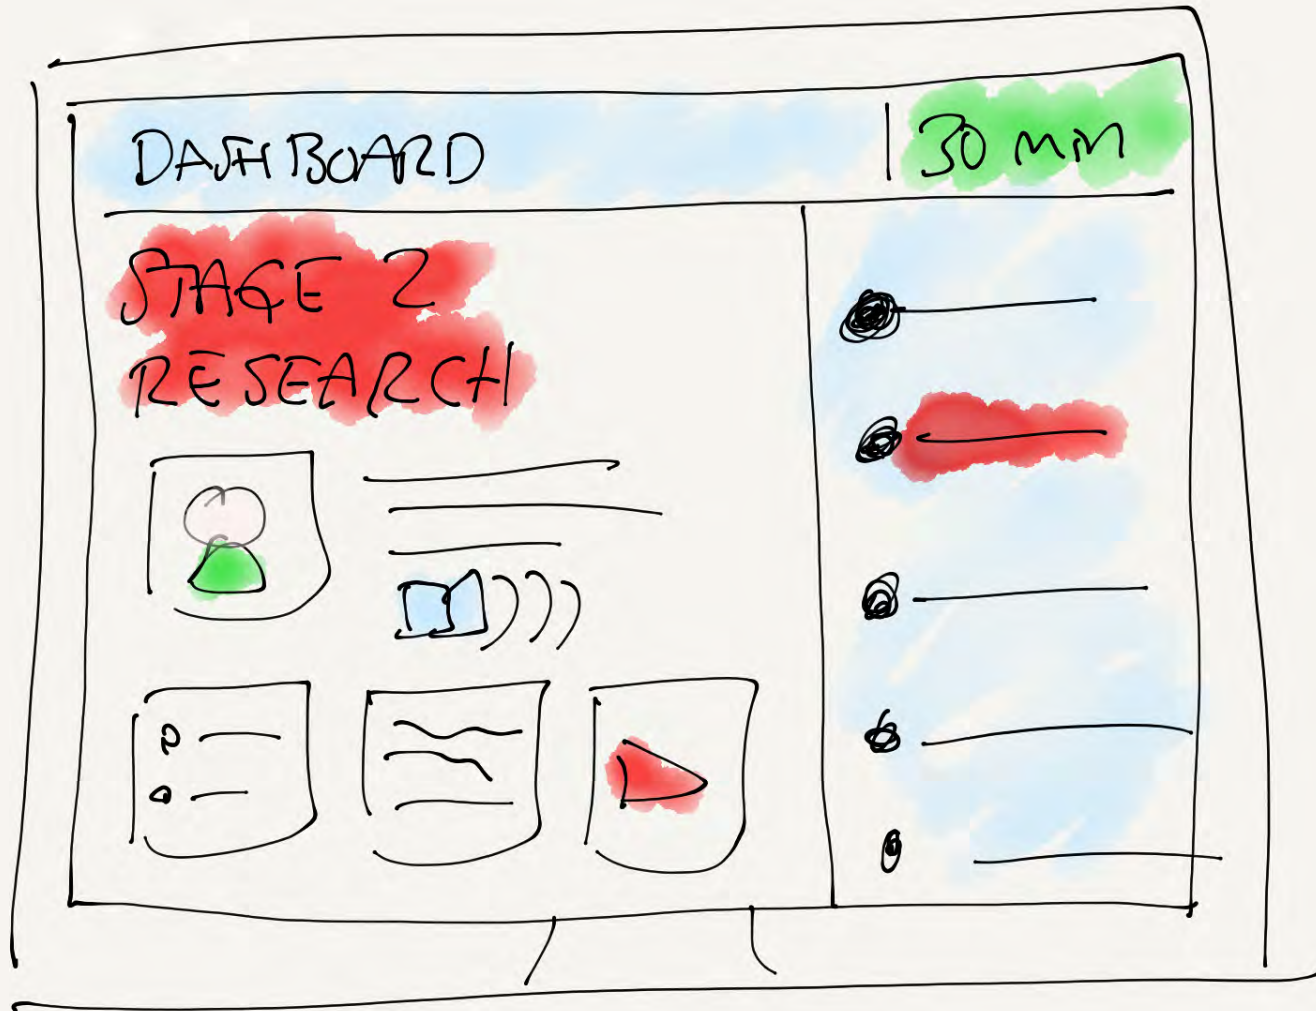

An expert in the subject briefs the learner on the challenge ahead; explaining what is required and what the expected deliverables will be.

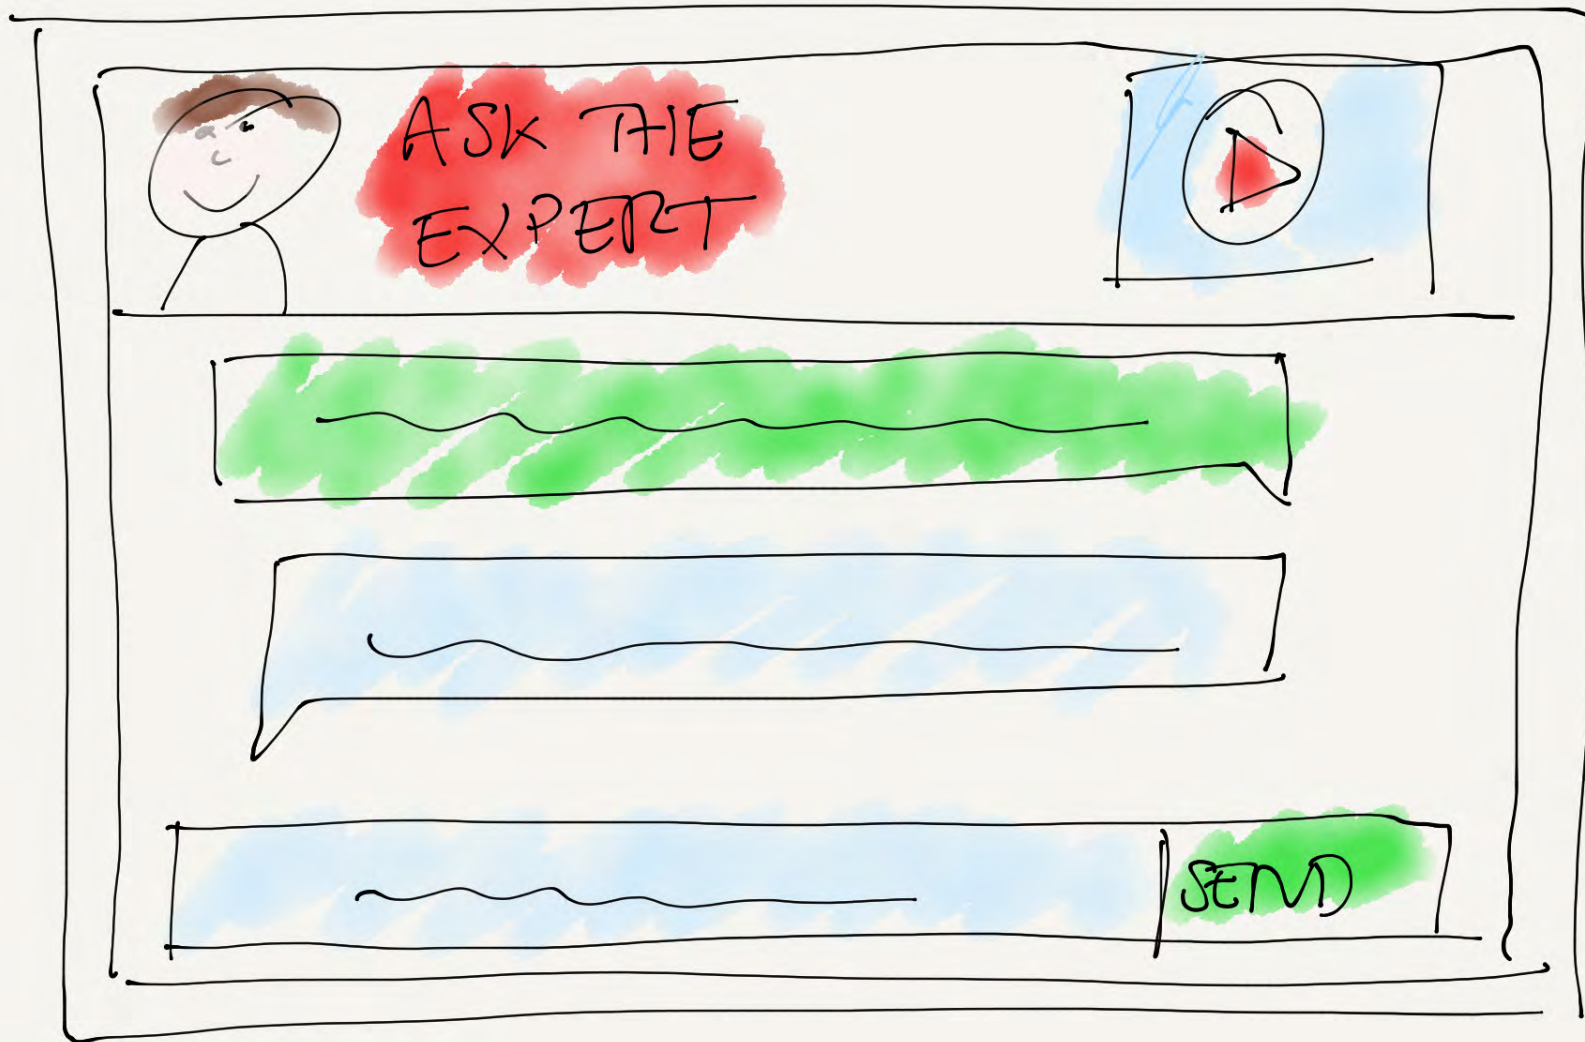

Everything in one place

The dashboard will have everything the participant will need for the challenge.

There are different challenge stages - e.g. the attempt to view online learning resources to help meet the challenge. Each stage is timed and the learner is guided through the experience.

Help is always available

We'll simulate talking to experts and other team members, using a text-based chat interface with the expert or team members simulated using chat-bot style A.I.

Immersive and experiential

We can also use video to simulate 'live events' - so people feel they are part of something bigger and not just working alone. In the future, this component could even be done in VR to bring a greater sense of immersion.
