

This canva aims to support participants in identifying and systematizing the constitutive elements of the hackathon of the Padua School of Engineering. The first step is the definition of the **USERS**: for whom are we planning our intervention? Then we move on **PAINS**: what are the problems and inefficiencies on which we want to operate? Clockwise, therefore, the **GAINS** are the advantages hoped for by the proposed intervention; the **SOLUTIONS** are the answers to the challenge and therefore the **TECHNOLOGIES** are the tools that we propose to use. This structure will also form the backbone of the final presentation of the project.
